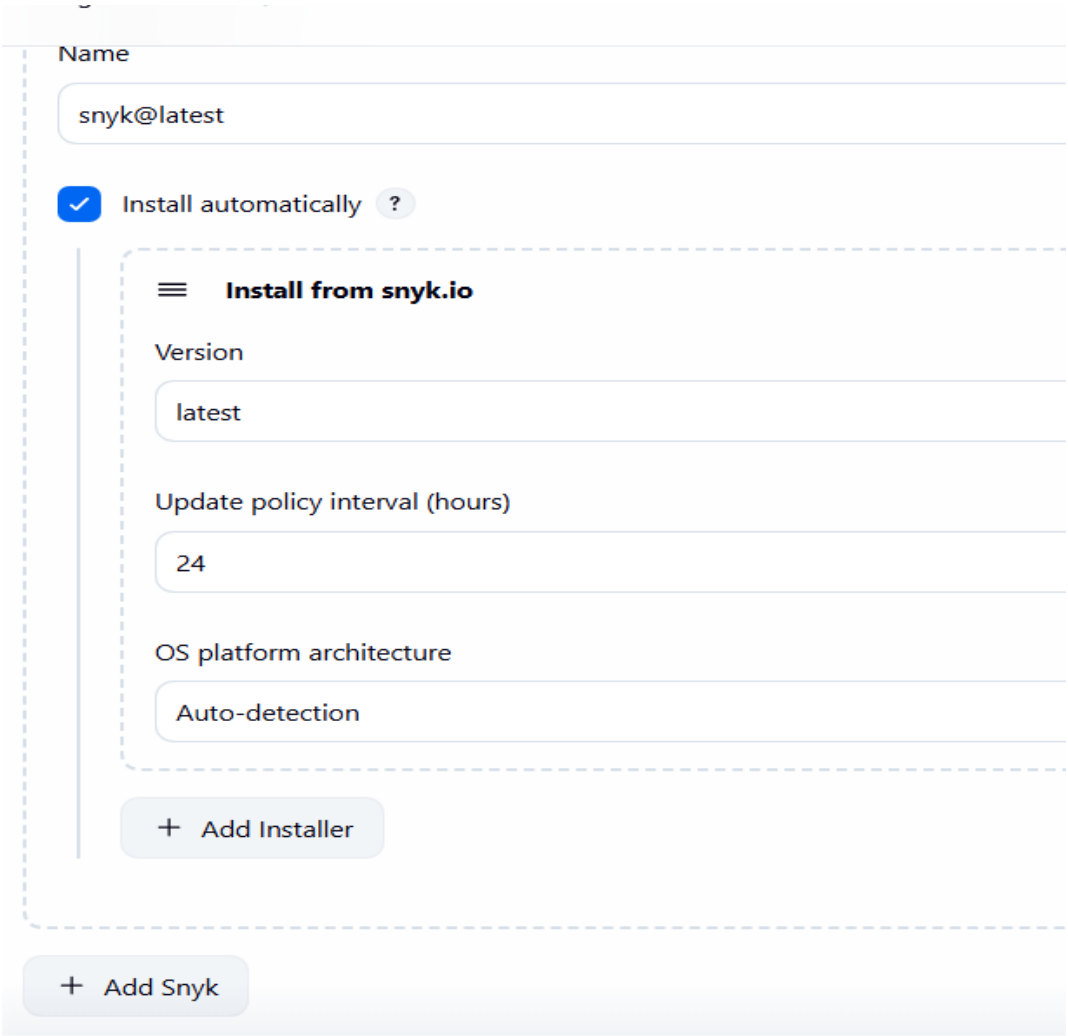
Snyk :

is a security tool. That helps to automatically find and fix the vulnerabilities .

[] Step 1: Install the Snyk Security Plugin

[] Step 2: Configure Snyk Installation (Global Tool Configuration)

1. Go to **Manage Jenkins** > **Global Tool Configuration**.
2. Scroll down to the "Snyk Installations" section and click **Add Snyk Installation**.
3. Provide a **Name** (e.g., "Snyk Latest") for the installation. Remember this name as you will use it in your pipeline script.
4. Check **Install automatically** and select the latest version from the dropdown menu. This ensures the Snyk CLI binaries are kept up-to-date.
5. **Save** the changes.



[] Step 3 Configure Snyk API Token Credential

- Obtain your API token from your Snyk account settings on the Snyk website.
- Navigate to **Manage Jenkins** > **Manage Credentials** > **System** > **Global credentials (unrestricted)** > **Add Credentials**.
- Select **Snyk API Token** as the **Kind**.
- Paste your Snyk API token into the **Token** field, provide a unique **ID** (e.g., `my-snyk-token`), and optionally add a description.
- **Create** the credential

Name

SNYK_API

Value

https://app.snyk.io

Pipeline code :

```
stage('Scan with Snyk') {
      steps {
      script {
          snykSecurity(
          snykInstallation: 'Snyk Scanner', // Use the name from Part 1, Step 2
          snykTokenId: 'my-snyk-token',   // Use the ID from Part 1, Step 3
                        // Optional parameters:
          failOnIssues: true,             // Fails the build if issues found
(default: true)
          severity: 'high',               // Minimum severity to fail the build
(low, medium, high, critical)
          monitorProjectOnBuild: true,    // Monitors the project on
```

Jenkins pipeline code:

```
pipeline {
    agent any
    tools {nodejs "npm"}
    environment {

        SNYK_API = "${env.SNYK_API}"
```

```
    }

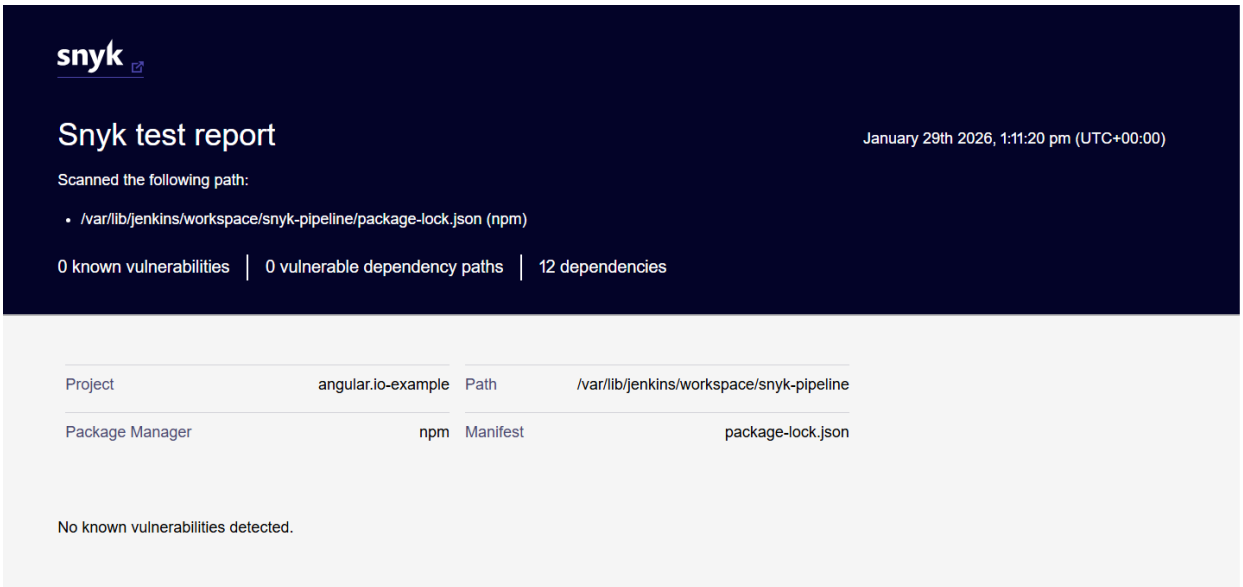
    stages {
        stage('checkout') {
            steps {

          git branch: 'master', credentialsId: 'PAT', url:
'https://git.stldev.io:1305/pradeepkumar.n/angular-ng.git'

            }
        }
        stage('Build') {
            steps {
                echo 'Building...'
                sh "npm install"
                sh "npm run build"

            }
        }
        stage('Test') {
      steps {
        echo 'Testing...'
        snykSecurity(
          snykInstallation: 'snyk@latest',
          snykTokenId: 'snyk-token',
           failOnIssues: true,              // 🔴 FAIL pipeline
           severity: 'critical'        // optional: low|medium|high|critical

        )
      }
    }
```

```
        stage('Deploy') {
            steps {
                echo 'Deploying...'
                // Your deploy steps go here
            }
        }
    }
}
```


it will give this Report:
