

This project is parameterized:

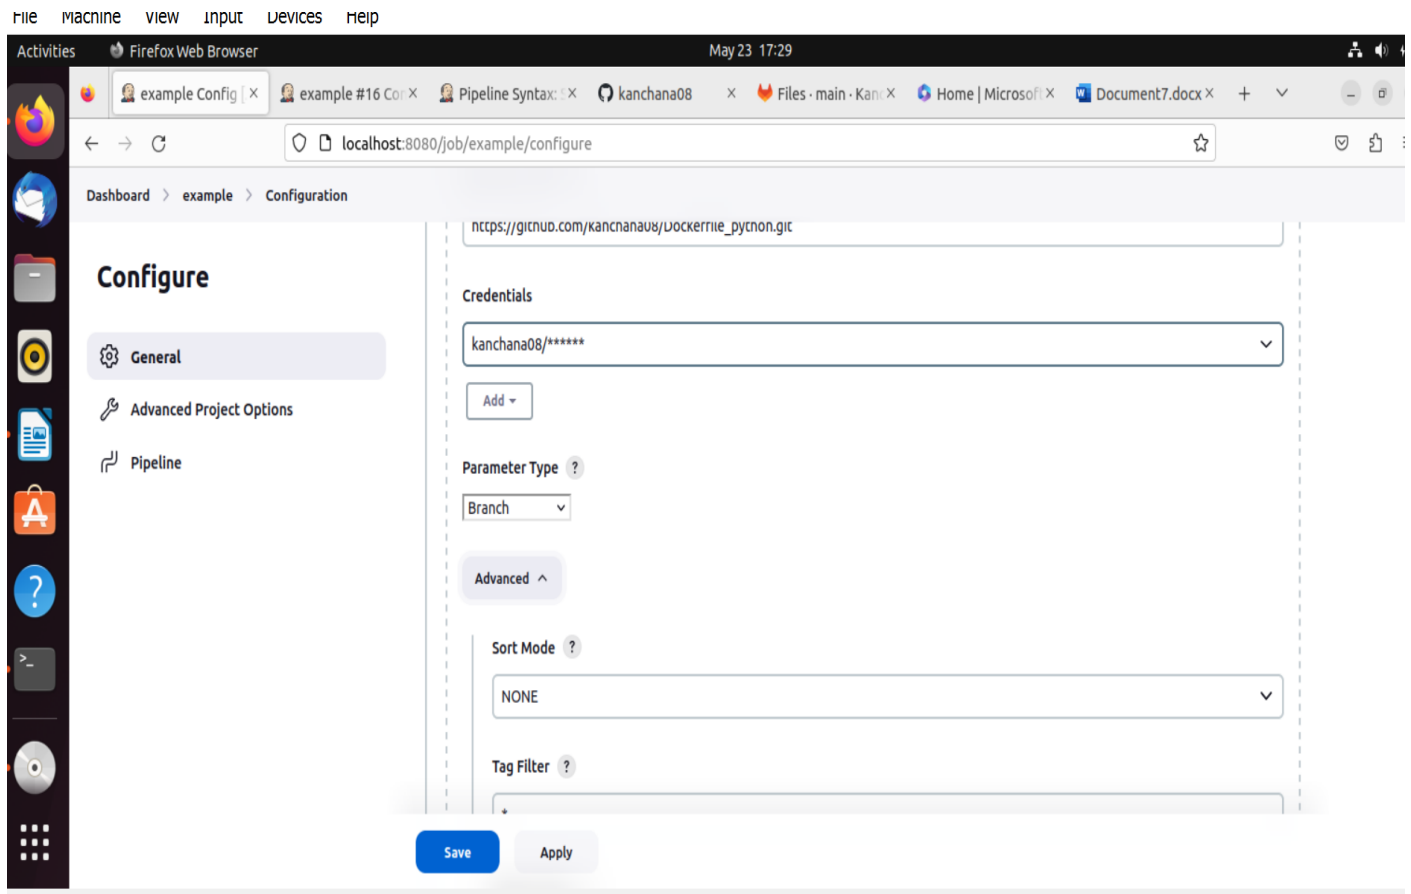

Using this project is parameterized it allows us to pass data our jenkins jobs using build parameters, using build parameter we can pass any data

First we need to install **list git branches parameter plugin**

In job configure select in this project is parameterize in that select add parameter and select add branches

Follow the below screenshots

```

pipeline {
  agent any
  stages {
    stage('checkout') {
      steps {
        echo "User selected branch is ${params.FROMBRANCH.split('/').last()}"
        git credentialsId: 'path', url: 'https://github.com/kanchana08/Dockerfile_python.git', branch:
"${params.FROMBRANCH.split('/').last()}"
      }
    }
  }
}

```

```
stage('docker build'){
    steps{
        sh 'docker build -t kanchana/new:v1 .'

    }
}
stage ('docker run'){
    steps{
        sh 'docker run --rm -dit --name sample -p 4567:80 kanchana/new:v1 '
    }
}
}
```
